IRONFORCE-100 INJECTION **IRON SUCROSE 100mg**

PRODUCT INTRODUCTION

IRONFORCE-100 Injection is an iron replacement medicine. It is used to treat a type of anemia where you have too few red blood cells because you have too little iron in your body (iron-deficiency anemia). Iron is needed to produce the red blood cells that carry oxygen around your body.

IRONFORCE-100 Injection is given by slow infusion (drip) into a vein by your doctor or nurse. Your doctor will decide the dose you need and how many injections you should have to improve your anemia. It will also help to eat a well-balanced diet that has enough iron. Good sources of iron include pulses (dal), green leafy vegetables like spinach, beans, eggs, dry fruits, and non-vegetarian foods.

USES OF IRONFORCE-100

- Treatment of Iron deficiency anemia**
-

BENEFITS OF IRONFORCE-100

Anemia is a condition where your body does not have enough red blood cells to carry oxygen around your body. If you do not have enough iron from the foods you eat (because of poor nutrition or poor absorption of the mineral), your body will produce fewer red blood cells and can cause anemia. IRONFORCE-100 Injection is an iron replacement product. It can boost your levels of red blood cells and reduce the symptoms of anemia such as tiredness and weakness. This medicine is given as an injection by a doctor or nurse. You should not have this medicine if your anemia is not caused by a lack of iron.

HOW TO USE IRONFORCE-100

Your doctor or nurse will give you this medicine. Kindly do not self administer.

HOW IRONFORCE-100 WORKS

IRONFORCE-100 Injection is an anti-anemic medication. It replenishes the iron stores in your body. Iron is vital for the formation of new red blood cells and hemoglobin, a substance that gives these cells the ability to transport oxygen.

SIDE EFFECTS OF IRONFORCE-100

- Taste change
 - Injection site reactions (pain, swelling, redness)
 - Nausea
 - Decreased blood pressure
 - High blood pressure
-

SAFETY ADVICE

Alcohol

Pregnancy
