MARBOZA-DSR CAPSULE

Pantoprazole Gastro Resistant 40mg and
Domperidone 30mg sustained release capsule

PRODUCT INTRODUCTION

MARBOZA-DSR Capsule is a combination medicine used to treat gastroesophageal reflux disease (Acid reflux). It works by relieving the symptoms of acidity such as heartburn, stomach pain, or irritation. It also neutralizes the acid and promotes easy passage of gas to reduce stomach discomfort.

USES OF MARBOZA-DSR CAPSULE

- Treatment of Gastroesophageal reflux disease (Acid reflux)**
 - Treatment of Peptic ulcer disease**
-

BENEFITS OF MARBOZA-DSR CAPSULE

Gastroesophageal reflux disease (GERD) is a chronic (long-term) condition in which there is an excess production of acid in the stomach. Rebozen-DSR Capsule reduces the amount of acid your stomach makes and relieves the pain associated with heartburn and acid reflux. You should take it exactly as it is prescribed for it to be effective. Some simple lifestyle changes can help reduce the symptoms of GERD. Think about what foods trigger heartburn and try to avoid them; eat smaller, more frequent meals; try to lose weight if you are overweight, and try to find ways to relax. Do not eat within 3-4 hours of going to bed.

SIDE EFFECTS OF MARBOZA-DSR CAPSULE

- Pharyngitis
- Cough
- Headache

HOW TO USE MARBOZA-DSR CAPSULE

- Take this medicine in the dose and duration as advised by your doctor. Swallow it as a whole. Do not chew, crush or break it. MARBOZA-DSR Capsule is to be taken empty stomach.
-

HOW MARBOZA-DSR CAPSULE WORKS

MARBOZA-DSR Capsule is a combination of two medicines: Domperidone and Rabeprazole. Domperidone is a prokinetic which works on the upper digestive tract to increase the movement of the stomach and intestines, allowing the food to move more easily through the stomach. Rabeprazole is a proton pump inhibitor (PPI) which works by reducing the amount of acid in the stomach which helps in the relief of acid-related indigestion and heartburn.
