HOW SILDISOFT-100 WORKS

Sildisoft 100 works by boosting levels and delaying the break-down of serotonin, a chemical found in the central nervous system, keeping the hormone level higher, which helps to slow down ejaculation. Dapoxetine was originally developed to treat depression but its affect was short lasting. As part of the testing it was found to help with premature ejaculation and is now used primarily for that purpose.

SAFETY ADVICE

Alcohol

Pregnancy

Breast feeding

Driving

Kidney

Liver
