WINSTROL STANOZOLOL U.S.P. 10 MG

PRODUCT INTRODUCTION

winstrol is an androgen (male hormone) that belongs to the class of 'anabolic agents', primarily used to treat low testosterone (natural male hormone or androgen) levels in men with hypogonadism. It is used to treat androgen deficiency and male infertility due to low hormone levels. MESTEROLONE is indicated for use in male patients only. Hypogonadism, also known as gonad deficiency, is a condition that occurs when the sex glands or gonads (testes in men) produce little or no hormones.

HOW TO USE WINSTROL

Swallow MESTEROLONE as a whole with a glass of water. Do not chew, bite, or break it.

HOW WINSTROL WORKS

Stanozolol reduces the release of a chemical called bradykinin, that is responsible for causing breaking and leakage of blood vessels. This damage to blood vessels leads to sudden accumulation of fluids below the skin causing swelling (edema) as well as redness. Stanozolol blocks the action of bradykinin and treats angioedema.
